DETAILED ACTION

Claims 1-3 are pending.

REASON FOR ALLOWANCE

Prior art fails to teach or fairly suggest an image processing method comprising the steps of: compressing the road image having undergone the inverse perspective process of vertical direction; determining slope in the lane markers from compressed image; determining a curvature in the road from the determined slop in the lane markers and determining a drive direction and a lateral lane deviation of the vehicle.

Although Yuhara et al (US 6,658,137) disclose a road sensor means comprising a means for capturing brightness values form plurality windows and to eliminate undesirable windows, the brightness value of the windows in this row are averaged and the windows having brightness values that are significantly different from the mean value are excluded.

But Yuhara et al fails to teach or fairly suggest the limitation of the claimed invention as recited in claim 1, particularly compressing the road image having undergone the inverse perspective process of vertical direction; determining slope in the lane markers from compressed image; determining a curvature in the road from the determined slop in the lane markers and determining a drive direction and a lateral lane deviation of the vehicle.
